The Second Species of the Family Odiniidae (Diptera, Acalyptrata) in Ukraine [Второй вид семейства Odiniidae (Diptera, Acalyptrata) в Украине]. — The genus *Odinia* Robineau-Desvoidy contains 11 species in Palaearctic Region (Krivoshaina, 1984; Catal. Pal. Dipt., 10: 260). Ten species are known from Central and Northern parts of Western Europe and European Russia. Korneyev (1997; Vestn. Zool., 31(4): 88) recorded *O. boletina* (Zetterstedt), rather common species of the family, from Kyiv. One ♀ of *O. czernyi* Collin was collected in vicinity of Kyiv (Bilychi, aspen woods along bogs and brook), on a rotten log, 17.05.2003 (Korneyev). This large (4–4.5 mm) rare species (hitherto known from Austria, Hungary and Russia) is recorded from Ukraine for the first time.

V. A. Korneyev (Schmalhausen Institute of Zoology, Kyiv).

The First Record of the Family Acarthophthalmidae (Diptera, Acalyptrata) in Ukraine [Первая находка семейства Acarthophthalmidae (Diptera, Acalyptrata) в Украине]. — The family includes the single genus *Acarathophthalmus* Czerny with 2 Holarctic and 2 Palaearctic species. The flies are associated with rotten fungi and carrion. Three species are known from Central and Northern Europe, including Switzerland and Romania. *A. bicolor* Oldenberg, originally described from Germany and Romania, then was recorded from Austria, Hungary, Finland, north of European Russia (Papp, 1984, Catal. Pal. Dipt., 10: 15), Poland (Trojan, 1962, Klucze..., 28(54–58): 14), Switzerland (Bachli, 1997, Fauna Helvetica Diptera Checklist: 277), Czechia and Slovakia (Maca, Rohaček, 1983, Čas. Slez. Muz. Opava, 32: 234; Rohaček, 1997, Checklist of Diptera of the Czech and Slovak Republics: 75). Ozerov (1986, Zool. zh., 65: 808; 1987, Biol. Nauki, 6: 32–35) found it in Far East Russia (Amur Region) and described preimaginal stages. In North America, it is known from the USA, Massachusetts (Steyskal, 1965, Catal. Dipt. N. Amer.: 808). Adult flies were collected from carrion (dead birds and a snake corps on late stages of decomposition) (Trojan, 1962; Ozerov, 1987; Bachli, 1997). A single σ of *A. bicolor* was collected in Kyiv, on carrion (a dog on late stages of decomposition) in the Kyryliv's'kyi Yar between Lukyanivka and Kurenivka, 9.05.2003 (Korneyev). The family, the genus and the species are recorded from Ukraine for the first time. — V. A. Korneyev (Schmalhausen Institute of Zoology, Kyiv).
